

Modern Dime Size Silver Coins of the World

**MEXICO**

FOOTNOTE: *The Modern Dime Size Silver Coins of Mexico* are arranged by Provincial mints, distinguishing each different **assayer** whose initials follow the initials which denote the **mint**. This series is very extensive, yet most of the variations are limited to the different mint initials and assayer initials. The author has many of the different mints and assayer combinations represented in his collection, however they were generally available in the lower grades of preservation which will show up on the illustrations. Remember these were the coins of the people and as a result saw much usage and therefore wear. An 1882 MoM 10 centavos is shown for Mexico City in UNC. which illustrates the original condition of this series.

FOOTNOTE: The early mintage records of the Provisional mints were not always complete, therefore the totals for the years 1863 - 1880 are surely understated in the tally of 10 centavos which totaled 1,086,575 strikings in silver. The known early coinage from the Mexican Provisional mints lists; Alamos 13,115, Chihuahua 48,170, Culiacan 8,722, Durango 2,500, Guadalajara 30,064, Guanajuato 232,000, Hermosillo 3,140, Mexico 562,004, San Luis Potosi 106,860 and Zacatecas 80,000. From 1881 the combined output of the Mexican Provisional mints of silver 10 centavos until they were closed in 1904 came to 35,810,782 coins, including a small mintage dated 1905 struck at Zacatecas before closing.

|                 |            |
|-----------------|------------|
| Alamos          | 367,990    |
| Chihuahua       | 1,572,430  |
| Culiacan        | 1,834,980  |
| Durango         | 1,165,588  |
| Guadalajara     | 2,527,394  |
| Guanajuato      | 4,777,000  |
| Hermosillo      | 849,200    |
| Mexico mint     | 11,494,000 |
| Oaxaca          | 52,000     |
| San Luis Potosi | 1,114,950  |
| Zacatecas       | 10,135,250 |

The wide variation from the Provisional mints most of which were near famous mining districts must reflect available silver and the needs of the population, except the Mexico Federal Mint whose output also reflects wide fluctuations directed by the government. During the next 39 years, with the price of silver increased to new highs during World War I, followed by the world wide depression in the 30's, the combined issue of 18-19MM silver coinage, both 10 centavos until 1914 and 20 centavos after 1919 from the Mexican Federal Mint from 1905 through the last issue dated 1943, amounted to 107,740,000 coins. The total recorded output for all Mexican mints since 1863 through 1943, a period of 120 years of 18-19MM silver coinage comes to 144,571,107 with perhaps another 1-2 million pieces during the early years of unrecorded mintages, which confirms that the small silver coins were produced as coinage for the people of Mexico, leaving the export of silver to be coined in the 8 real size, so well known in the Orient that it was generally referred to as the 'Mex' Dollar.

FOOTNOTE: Alamos a mining town is situated at an elevation of 1276 feet above the sea, on the Alamos Arroyo, a tributary of the Fuerte River. It gets its name from the immense cottonwoods which surround the Plaza. Near by mines date from remote times and are very productive. Alamos is in the State of Sonora. The mint opened in 1862 to issue coinage of both gold and silver. The 10 centavos coins were struck from 1874 to 1893. The Alamos mint closed in 1895.

FOOTNOTE: Currency of Mexico - 8 reals or 1 peso = 100 centavos.

FOOTNOTE: Chihuahua mint opened in 1831. The first 10 centavos type struck by the Chihuahua mint starting in 1868 was the same type struck only in 1863 at the San Luis Potosi mint, known as the wreath reverse. Chihuahua is the capital of the State of Chihuahua. It is located 999 miles from Mexico City.

FOOTNOTE: Chihuahua (pronounced Che-wah-wah) is situated 4,600 feet above the level of the sea., derives its name from the two indian (tarahumare) words signifying "place of the worship". The region roundabout is celebrated for its enormous output of ores. The Cathedral dates from 1717 and one of the old bells in the tower has a hole that was shot through it by the Republican forces who bombarded the town when it was in possession of the French troops of Maximilian in 1866.

FOOTNOTE: Mexican coat of Arms dating back to 1823 has been the Eagle sitting on a cactus with a snake in its beak. The representation comes from Indian Mythology.

FOOTNOTE: The Durango mint opened in 1811 under the Spanish. It closed in 1895. Durango derives its name from the old Spanish city in the Basque Province of Durango.

FOOTNOTE: Durango, sometimes called Ciudad de Victoria, or Guadiana, a city of Mexico, the capital of the State of Durango, lies near the foot of the south-eastern slope of the Sierra Madre, at a height of 6847 feet above the sea. It possesses a cathedral, ten parish churches, a hospital, government-buildings, a penitentiary, a state prison, a bull-ring, and a large cock-pit. It is well supplied with water by thermal and other springs, which also fill considerable number of channels along the street. Trade is carried on with the northern and north-western states; and besides the Durango mint, a gold refinery, and other offices connected with the mining operations, there are a glass works, printing-presses, and factories for cotton and woolen goods, leather, and tobacco. In 1868 there were 12,449 inhabitants. *Encyclopedia Britannica, 9th Ed. 1887*

## City of Guanajuato

FOOTNOTE: Santa Fe de Guanajuato is the capital of the State of Guanajuato, Mexico situated 6200 feet above sea-level and 165 miles northwest of Mexico City. In the vicinity are numerous silver mines, among the richest in Mexico. One of the richest, oldest, and most picturesque towns in the Republic, is poised high above the great plateau, in a narrow mountain gorge traversed by the Guanajuato River. The ground beneath the irregular city is honey-combed with tunnels and shafts which tap immense rich deposits of gold and silver ore.

FOOTNOTE: The name Guanajuato is derived from Guanaxhuato, a Tarascan Indian word signifying *hill of the frogs*. Mexican historians agree that this appellation was given to the place because of the great number of frogs which once made the spot their habitat; and also because of an enormous stone chiseled to represent a frog (rana), which was found there by the ancient Chichimels and long worshiped by them in lieu of a more suitable divinity.

FOOTNOTE: The Second Mexican Empire - Between 1864 and 1867 Mexico was occupied by French troops and the Archduke Maximilian of Austria was crowned Emperor Ferdinand Maximilian of Mexico at the age of 32. The reign was brief and lasted until his execution at Queretaro on June 19, 1867.

FOOTNOTE: Maximilian, Emperor of Mexico, known in his earlier life as Ferdinand Maximilian Joseph, Archduke of Austria, born at Vienna, 1832, was the younger brother of Francis Joseph I of Austria. In 1863 he was induced by the Emperor Napoleon III and also by a deputation of Mexican notables, to accept the throne of Mexico. With this intention he entered Mexico in June 1864. Maximilian was at first extremely popular; yet he failed to conciliate either the Church Party or the Republicans, and the latter, under Juarez, rose in revolt. Having become involved in financial and political difficulties, Maximilian, with the approval of Napoleon III, resolved to abdicate in 1866, and he had proceeded to Orizaba when he was induced to return by the Conservative Party in the state. The fighting which followed culminated in the capture and execution of the Emperor and two of his chief generals, June 19, 1867. *New Cabinet Cyclopaedia, Phila., 1896.*

## Mexico City

*Engraving from Encyclopaedia of Geographyp, Phila., 1839*

FOOTNOTE: Mexico City is the most ancient, and one of the most populous cities in America. It is situated near Lake Texcuco, in a delightful valley, which is 230 miles in circumference, and elevated more than 7,000 feet above the level of the ocean. It is regularly built in the form of a square, of four miles on each side. It is distinguished for the width and regularity of its streets, the splendor of its public edifices, and for its mint, at which more money is coined than at any other in the world. *Olney's Geography, 1849.*

FOOTNOTE: Juarez, Benito Pablo, President of the Mexican Republic, was born of pure Indian parentage in 1806, and was elected President in 1861. He declared the suspension of public payments for two years to Europeans, a step which occasioned the interference of Britain, Spain, and France. Troops were landed in Mexico in 1862, but Britain and Spain soon retired, leaving Napoleon III to carry out his views alone. Maximilian of Austria came on Napoleon's invitation to assume the throne of Mexico, but Juarez, in spite of defeats and losses, continued to head a resistance, and when Napoleon III under pressure from the American Government withdrew his troops in 1866, the Republicans carried all before them. Maximilian was captured and shot after a mock trial, and Juarez was re-elected to the Presidency in 1867, which he held till he died in 1872. *New Cabinet Cyclopaedia, Phila., 1896.*

FOOTNOTE: General Porfirio Diaz entered Mexico City November 24, 1876 at the head of a revolutionary army and proclaimed the Provisional Presidency.

FOOTNOTE: Mexico City, Capital of the Republic of Mexico, is situated within the State of Mexico in the Federal District (461 sq. miles), about 7400 feet above the level of the sea, near several lakes. It is situated at about equal distance from Vera Cruz on the Mexican Gulf, and Acapulco on the Pacific, and is laid out with great regularity. It is on the site of the ancient City of Tenochtitlan, which was destroyed on the capture of Mexico by the Spaniards in 1521. the principal public buildings are the cathedral, forming one of the sides of the central square, the Palace of Government; the College of Mines, a noble building, but now somewhat dilapidated; the Mexican Federal Mint, with a front of 360 feet by 250 in depth, the town-house, the University, etc. There are numerous convents, hospitals, churches, theatres, etc. The manufactures are of comparative limited extent, and the trade is mostly in the hands of foreigners. Mexico enjoys a mild climate, and a pure and healthy atmosphere. Population on Mexico City - 1891 - 329,535. *New Cabinet Cyclopaedia, Phila., 1896.*

FOOTNOTE: President Diaz established a new monetary system by decree on March 25, 1905, closing all Provincial mints. This discontinued free coinage of silver, and did not provide for free coinage of gold, but additional silver money could be coined for those presenting gold. Old subsidiary coins which were .902 65/72 fine, were to be replaced by new ones containing 25 grams of silver, 0.800 fine, to the peso. The coinage ratio for the old peso worked out at 32.59 to 1, and the bullion parity was 63.4 U.S. cents per ounce. For the new subsidiary coins, the corresponding figures were a coinage ratio of 26.67 to 1, and a bullion parity of 77.4 U.S.cents per ounce. *Silver Money by D.Leavens, Bloomington, Ind. 1939.*

FOOTNOTE: A rise in the price of silver caused a reduction in the size and weight of the 10 centavos to 15 MM - 1.8125 grams and the 20 centavos as above, the design remained similar to the previous issue.

FOOTNOTE: The 20 centavos is often called by the Mexicans a *peseta*, the diminutive of peso, whereas the ten centavos is referred to as *un decimo* or a tenth or dime. Men carrying specie in canvas sacks are familiar features in the Mexican streets. A strong tobacco pouch with tie-string is a handy receptacle in which to carry Mexican coins. *Terry's Guide to Mexico, 1930.*

## 25 Centavos 1913 State of Sonora

FOOTNOTE: The event of chief importance in Mexico in 1920 was the successful revolt against President Venustiano Carranza, who for nearly six years, since August 14, 1914, had ruled the country, though he had never succeeded in entirely restoring order. He was not friendly to the Administration in Washington and the relations between his country and the United States remained unsatisfactory. This was due chiefly to his failure to prevent the killing of American citizens and the destruction of American property in Mexico. The revolution against Carranza began in the State of Sonora April 10, 1920, when proclamations appeared on the streets of Agua Prieta calling the citizens to take up arms against the Central Government on the grounds that after ten years of fighting it had not accomplished anything for the best interests of Mexico. The movement was led by Gov. Adolfo de La Huerta, who announced that the Congress or Legislature of the State had voted to secede and would resist any attempt on the part of Carranza Administration to send troops into Sonora. Gen. P. Elias Calles was made Commander of the military forces of the "Republic of Sonora". The rebellion spread rapidly to other states and Gen. Alvaro Obregon, who had been technically under arrest in Mexico City on the charge of aiding General Roberto Cejudo, another rebel leader, took Command. He was a candidate for the Presidency to succeed Carranza and as such was looked upon with suspicion by the heads of the government. Troops from Sonora invaded the State of Sinaloa and under the leadership of Gen. Angel Flores made rapid progress southward. President Carranza was deserted by many of his officers and soldiers and the revolt spread so rapidly that in less than two weeks Mexico City was practically besieged. On April 22 the rebels in Sonora set up a new Provisional Government with General de La Huerta as Supreme Commander and called upon Carranza to relinquish the Presidency. On May 7 Carranza with a few of his soldiers fled from Mexico City on the approach of General Obregon. He was pursued by General Benjamin Hill, General Trevino and other rebel commanders and after a number of minor engagements they surrounded him in the mountains of Puebla. There he and his few followers were attacked by General Rodolfo Herrero and early on the morning of May 20 he was shot and killed at Tlaxcalalongo. The exact circumstances of his death were not made known, though, according to statements made by General Obregon, the killing was contrary to his wishes and orders. The body of the dead Chief was brought to Mexico City May 23. General Herrero, who was accused of assassinating Carranza claimed that the latter committed suicide rather than submit to arrest. On May 24 Adolfo de La Huerta was elected Provisional President of Mexico by the Federal Congress in the Capital. A general election was held September 5 1920 when General Alvaro Obregon was chosen to the Presidency without much opposition. The Bandit Francisco Poncho Villa surrendered and made his peace with the new government in July...He surrendered "unconditionally". He was permitted to retain his freedom and to retire to private life. Villa was the main object of a search by a private expedition under General John J. Pershing, United States Army in March 1916. There were some minor uprisings in Mexico after the Huerta-Obregon regime began, but they were quickly suppressed and the country was at last restored to a semblance of good order. The new administration expressed friendship for the United States... *The Daily News Almanac and Year Book 1921, Chicago, 1920.*

## 1920 - 20 CENTAVOS - REVERSE

FOOTNOTE: Mexico by its Constitution of 1917 became a Federated Republic governed by a President elected by direct popular vote for 4 years, with a Council and Congress of two houses. The Republic is composed of Federal District, 28 States and two Territories. The population by 1930 was 16,404,025 with 19% white, 38% native Indian and 43% of mixed races.

FOOTNOTE: In 1937 wages in Mexico were very low. The daily wage in pesos for unskilled labor was 1.40 pesos (equal to .32 cents U.S.) at the top of the scale was a mechanic earning 3.79 pesos daily (equal to .86 cents U.S.) and an english-spanish stenographer would earn 225 pesos monthly (\$50.79 U.S.). *U.S.Dept. of Commerce, 1937.*

FOOTNOTE: **The price of silver in the spring of 1935** - By the beginning of 1935 the market price of foreign silver had risen to U.S. .55 cents per ounce, which was still well below the U.S. Government price for domestic silver. About the middle of February, however, the market price for foreign silver began to rise, and went up rather steadily until, on April 10, 1935 it reached 64½ U.S.cents per ounce. Around noon of that day Secretary of the Treasury Morgenthau told reporters that the Government was ready to meet the world price of silver, whatever it might be. That evening the President of the United States issued a proclamation that increased the effective price for newly-mined domestic silver to 71.11 U.S.cents per ounce. The chief result of this action was to stimulate the world market price of silver, which rose to 68½ U.S.cents in two days and after a slight reaction reached 71½ U.S.cents per ounce on April 24, 1935... Again the President issued another proclamation raising the effective price to 77.57 cents per fine ounce. The market price jumped to 77 cents the next day, and to 81 cents on the day after. The two successive official increases apparently gave the silver market the idea that any rise in the price would be matched immediately by the U.S. Government and opened the way to a vicious upward spiral in the price of silver which would benefit no one but producers and speculators. In the next few weeks the market price fluctuated between 71 cents and 77 Cents per ounce. But the government took no action. The rising price of the white metal made silver coins of Mexico worth melting. Mexico had established a bullion parity of U.S.\$1.291 per ounce for her silver coins in 1919 to meet the (continued).

**Silver** ( Continued) wartime rise in the price of silver. During the world depression, however, she had not been able to maintain the gold standard, and the exchange value of her silver currency had depreciated below the gold par, although not down to the bullion value of the silver coin. From early in 1934 the exchange value of the peso had been maintained at 3.60 pesos to the new American dollar. On January 31, 1934 President Roosevelt issued a proclamation reducing the weight of the gold dollar from 25.8 grains of gold, 0.900 fine, containing 13 5/7 grains of fine gold. This established a U.S.\$35.00 price for gold with no change in the U.S.\$1.2929 monetary value of silver, making the American coinage ratio 35.00/ 1.2929 = 27.07 to 1 in place of the old 16 to 1. At that exchange rate, the bullion parity of the Mexican peso worked out to 71.9 U.S.cents per ounce. As a result, when silver passed 72 cents per ounce there was incentive to melt the silver coins and export them. Mexico thus began to experience a currency situation similar to that which she had gone through in 1906 and again during World War I. The Mexican Government acted quickly and on April 26, 1934, ordered the surrender of silver coins to the Government in exchange for paper money. The export or melting of silver coins was prohibited. A Bank Holiday was declared over the weekend to facilitate adjustments. Mexican Banks reopened April 29, 1934 and except for a shortage of small change before new bronze coins could be placed in circulation to replace silver, there was no serious inconvenience. A large bronze 20 centavos dated 1935 was struck similar to the issue of 1920. There was no issue either bronze or silver dated 1936. The price of silver dropped below 50 U.S.cents per fine ounce during 1936, so subsidiary coinage was resumed in 1937 with a large issue of the 20 centavos in silver at the same standards as earlier. The mintage was 10,000,000 for 1937, no issue dated 1938, but yearly strikings commencing 1939 through 1943 when Mexico again changed to bronze 20 centavos of a new type dated 1943. *Silver Money by D.Leavens, Bloomington, Ind. 1939.*

FOOTNOTE: Oaxaca pronounced Wah-hah-cah, a Spanish corruption of the Indian Huaxyacac - 'a place covered with trees', is the capital of the Mexican State of Oaxaca. It is located 228 miles from Mexico City. Oaxaca is situated 5067 feet above sea level. In 1872 the name was changed to Oaxaca de Juarez. The Oaxaca mint opened in 1858 and closed in 1893.

FOOTNOTE: Diaz, Portinio, President of Mexico, was born September 19, 1830 at Oaxaca, of Spanish parentage, and was studying law in his native town when the War with the United States broke out. Young Diaz entered a Militia Regiment in 1847 and henceforth devoted himself to a military career. In 1854 he commanded a battalion under Alvarez in the contest against Santa Anna. Two years later he identified himself with Juarez and the Liberty Party, and in 1861 was elected Deputy to the National Congress. He soon resigned to take the field, and won a victory over the reactionist Marquez at Jalatlaca. During the French intervention he won a high reputation as one of the most skillful and courageous of the patriot leaders. In May, 1863, when directing the defense of Puebla, he was forced to surrender, but escaped shortly after and went to Oaxaca, where he raised a new force and made considerable headway against the French. In February 1865, he was again captured, but escaped once more, and once more reappeared at the head of an army he had brought together at Oaxaca. He gradually forced the invading troops to adopt the defensive, and after the evacuation of Mexico by the French, he advanced to Puebla and took the city, April 2, 1867. On June 21 he entered the City of Mexico. In the same year he was a candidate for the Presidency against Juarez, but being defeated, withdrew to his estates. He never ceased plotting against the government, however, and his intrigues occasionally broke out in the form of armed revolt against Juarez and his successor, Lerdo de Tejada. He was twice forced to flee the country - in 1872, and again in 1876. Returning quickly on both occasions, Diaz succeeded in the latter year in defeating his enemies at Tecocac (November 16). He finally drove Lerdo out and in May, 1877, he became President. Order was restored in a remarkably short time. President Diaz soon managed to win the confidence of European investors, the country was opened up, industries were developed, and the modern period of prosperity was firmly established. As the Mexican Constitution provided that no man should hold the Office of President for two consecutive terms, General Diaz was succeeded in 1880 by his close personal friend, General Gonzalez. It soon became evident, however, that only one man could win the trust and support of the Mexican people and of the foreign capitalists upon whom the welfare of the nation depended, and so, after Diaz had been again elected President in 1884, the constitution was amended, in order to provide for his continuance in that office. The forms of election by popular vote have been duly complied with at each recurring period since, but no serious opposition to 'Don Porfirio', as he is affectionately called by the Mexican populace, has developed. He died on July 2, 1915 at the age of 84. *New Cabinet Cyclopaedia, Phila., 1896.*

FOOTNOTE: Mexico has long been a country with a single political party, that of the Diaz autocracy. Liberalism antagonism to the Diaz plan of government, has been repressed with a strong hand. No one will deny that under Diaz a notable progress was made in Mexico. The country changed under his rule from a republic to a military autocracy, and the emperors of old Rome itself were little more absolute. In these days the newspaper is the voice of the people. When Diaz became President political criticism was as free as the wind. President Diaz did not counsel the Congress to make laws curbing the over-radical journalists. His method was a personal one. He sent the police to arrest some of the most outspoken editors and had them locked up in Belen Prison - a place of terror intended only for the lowest class of criminals, not for gentlemen of culture and standing in the community. Here they were kept for a week on a diet of bread and water. This week of discipline ended, they were brought before the President. "Now, gentlemen," he asked, "what do you think of my government?" "Senor President," they replied, "we look upon it as the finest government upon the earth." "Just continue to think so, gentlemen, and I think we shall get along splendidly." After this lesson in practical politics there was no more trouble with newspapers in Mexico...Diaz did not govern through the force of legislative sanction, but through the iron hand of military force.

FOOTNOTE: The City of Zacatecas, 439 miles by rail northwest of the City of Mexico is located in a lofty valley some 7500 feet above the sea. Owing to the narrowness of the valley in which it is situated, the city spreads in irregular blocks, with winding streets, up the sides of the encircling hills. There is a municipal palace, containing an attractive courtyard, the Zacatecas mint, and the Calderon Theatre. Zacatecas owes its settlement and subsequent prosperity to its silver deposits. Population of the city in 1900 - 32,856 inhabitants. *New International Encyclopedia, 1910.*

FOOTNOTE: The chief importance of the Mexican State of Zacatecas lies in its extensive silver deposits, which have been worked since the middle of the sixteenth century. The first silver mine was opened in 1548; from 1610 to 1810 at least 670,000,000 pesos were taken from the three famous mining centers of Zacatecas, Fresnillo, and Sombrerete. *New Cabinet Cyclopaedia, Phila., 1896.*

FOOTNOTE: Zacatecas is situated in a mountainous country, 7500 feet above sea level, 439 miles north of Mexico City. It lies in a narrow ravine at the foot of the Grillo (Cricket) and Bufa Mountains. The name Zacatecas is derived from the Aztec 'Zacatl' or 'Zacate', (hay) and 'Tlan (country or place) - Zacatlan signifying the place occupied by the tribe of indians known as Zacatecos. It is one of the most celebrated mining places in Mexico. The Zacatecas mint opened in 1810 and was closed in 1905 as one of the last provisional mints.

FOOTNOTE: Old mines - with which the ground beneath the City of Zacatecas is honeycombed are still worked. Primitive methods are still employed and the ores are brought up by means of crude windlasses or in raw-hide sacks slung on the backs of peones who, with a 100 or 200 lb. weight climb rickety ladders. Population - State of Zacatecas - 1895 - 447,265
